To whom it may concern.

Blackie was examined on 6 March 2024. He was brought in by his owner, Mrs Marlene van Boven. He has a skin condition, dry scaly skin and hair loss due to fleas. Dog was treated with Nexgard Spectra and cortisone for dermatitis.

There was a history of fitting. Owner is only aware of 1 fit last year. We discussed blood tests with her and the possibility of an enlarged heart which could cause fainting, which might look like a fit. X-rays showed a normal size heart. We discussed doing the blood work but due to costs, owner will treat the skin first and do the blood tests at a later stage if the fitting persists.

Kind Regards

Dr Marlise van der Merwe
