To whom it may concern

On 28th August 2024, I, Dr. Anrone Bezuidenhout visited HAWK in order to do clinical examinations on 100 dogs.

Most of the dogs are overweight and has tooth fractures. The dogs were fed mostly bones.

The total amount of dogs were estimated to be 125.
We examined 104 dogs in total.

Only **32** dogs were in an acceptable condition and in need of treatment for fleas.

There were 57 dogs that needs to be seen by a veterinarian for mostly skin conditions and chronic ear infections (otitis externa).

The skin conditions is mostly due to flea bite dermatitis/hypersensitivity.
A few dogs had loose teeth and mild gingivitis.
There were a few that had discoloration of the fractured teeth and showed sensitivity.
All of these dogs were in good to overweight condition.

There is a total of 15 dogs examined that are in need of veterinarian care urgently:

1. Peaches,(26) Female Cross breed, light brown and white. Very weak, T37.6, mm cyanotic and pale, severe eczema on back an oedema around the eczema. Diarrhoea.
She was taken to MDH and admitted for treatment.
2. Daneese(8), Pitbull cross, female not spayed, brown and white, yellow eyes.
T38, mm pale pink, mammary glands needs to be checked and blood smear NB.
3. Todd(12), castrated male light brown.
Mass between penis and abdomen.
4. Tombi (24) black crossbreed intact female.
Possibile that she is pregnant, Otitis externa.
5. Banglow(37), brown crossbreed, spayed female.
