General Report Comments: Upon arrival, no one was present. The warning left have been removes from the posts, indicating the owner received them.

The enclosures are still the same, except for the one that has an opening where the pigs are jow coming out and roaming freely outside the enclosures.

The middel partition between the 2x large enclosures has also been opened up between the 2 which allows the pigs to move between the enclosures and utilise the one enclosure that has a semi solid roof structure. The area under the roof structure was dry during the time of inspection, even after we had rain in the area this morning, indicating this section of the enclosure is providing suitbale protection against rain.

5x pigs were roaming outside and a few were still in the enclosure. The one pig previously observed confined to the one enclosure with no shelter has been moved and placed with the others.

Food (veg and fruit mix) was observed inside buckets inside the enclosures.

I will follow up on Thursday again to see that the animals still have access to roam freely and have access to shelter and to ensure there are no pigs in the enclosure with no shelter.
