On the 21st of January 2026, I conducted an inspection at the abovementioned mobile grooming facility, and our findings were as follows:

Comments and Recommendations

There were no animals being groomed when the groomers were offering to groom some of our dogs voluntarily at the Sandton SPCA. The grooming vehicle is a Suzuki Super Carry customized LCV (Light Commercial Vehicle). All equipment (grooming utensils) was in an acceptable condition. The vehicle featured a mobile storage water tank with a built-in rapid water heater (up to 35°C). A new grooming dryer with temperature (up to 39°C) was found. A rough tote was used as a wash bathtub with an outlet drainpipe fixed to it without a straining mechanism. The mobile facility also has an electric power source for powering water usage. A shampoo product called Jancra™ Foam & Bubbles Dog Shampoo used sourced from a local retailer did not have info on active ingredients/agents on the label (if label did not peel off) yet you were assured that it was hypoallergenic.

However, the vehicle did not feature a fire extinguisher(well-serviced), a drain strainer to minimize shedding pet hair and a fully labelled and informative shampoo products. The fire extinguisher will be required for a case of fire for using electric in conjunction with water sources. A drain/basin strainer is still required to prevent pet hair being a public health hazard when draining wastewater either by installing netting on the outlet point or on the sink point. Only bathing pet products from reputable wholesalers with clear labelling of active ingredients/agents to avoid any skin irritation possibly arising out of the use poor labelled products. All grooming equipment must be kept in good hygiene, repair and good service.

We trust you will consider these recommendations and routine inspections on your mobile grooming facility will be carried on an unsolicited basis.
