General Report Comments: Upon arrival I hooted and met the owner and he granted me access to enter the property.

I observed a male dog on a property that appeared to have external parasites. The dog appeared to be clinically alert and the dog has access to adequate shelter. The 2nd dog appears to be in a good condition and clinically alert.

The dog that has puppies is kept by the neighbor who love dogs. The dog is clinically alert and slightly underweight from breastfeeding the puppies. The dog has access to adequate shelter and the living environment is clean and hygienic. Pieter doesn't wanna surrender the dogs to the SPCA and i offered a sterilization explaining the benefits and he will think about it . All the dogs are roaming freely on property and no puppy appears to be sick.

I issued a warning
To treat the animal/s for teak and Fleas within 72 hours and continue treatment regularly.
