Report/Findings:

A comprehensive inspection has been carried out, detailed in the attached full report. In brief, three lactating sows were found in poor condition, while other pigs were in acceptable health. The pig pens are deemed hazardous and require repairs, and additional shade must be provided.

In my view, the poor condition of the pigs is attributed to inadequate management, specifically the failure to wean piglets and separate the pigs. The owner's lack of daily feeding, likely due to transportation challenges, is suspected as a contributing factor.
