## To whom it may concern

On 20/11/24 I examined two young female white Tigers of Aneesa Dhunee of 8 Van Dyk Road Benoni.

The one was limping 1/5 RF leg and the other one 2/5 RH leg. In my opinion and with the result of my clinical examination I think the limping is due to the cubs playing causing soft tissue injury.

I gave them Excede and Carprophen injections and Meloxicam tablets for 3 more days home treatment.

If the limping does not resolve or gets worse, I suggest taking X-rays under sedation to see if there is any bone involvement.

You can contact me on Whatsapp 0834899141 if more information is needed.
