Vet report for Jackson and Tin-Tin Earl

To whom it may concern,

This letter is to confirm that we examined Jackson and Tin-Tin Earl as requested by the SPCA on the 2nd September 2021.

Jackson is a 60,5kg 4 year old tan male in tact Boerboel. He is aggressive therefore a clinical exam could be done from a distance. It is obvious that he has got a skin condition which could either be mange, allergic dermatitis, or both. His BCS is 2.5/5. Ribs are slightly visible. Current diet apparently is "Lionel's choice". The owner said that he had given Bravecto a month ago and deworming 2 weeks ago (the deworming product is unknown) after the Bravecto, the skin condition seems to have improved slightly according to the owner. Mr. Earl also said that he has been using a variety of different shampoos on Jackson. I advised him to carry on with the Bravecto every 3 months and dispensed an F10 medicated shampoo for once a week washes according to the instructions on the bottle. Also told him to come back for a re-visit in a months' time to monitor for any improvement.

Tin-Tin is a 9 year old 11.5kg male in tact Jack Russel Terrier. Upon clinical examination, Tin-Tin also has got a similar generalized dermatitis also attributed aptly to mange and probable allergic dermatitis. Owner said that he has also given Tin-Tin a Bravecto a month ago as well as deworming of unknown name 2 weeks ago. He claimed that there has been slight improvement in his skin since the Bravecto administration. He has also been using various shampoos. Dispensed a f10 shampoo for weekly washes as instructed.

Tin-Tin has got severe halitosis with periodontitis gingivitis and apparent tooth root abscessation especially around his molars. Tin is also showing marked masticatory and facial muscle atrophy. His BCS is about 2.5/5. We also noted a mild pyrexia @ 39.5.

Recommended that o book him in for a dental as soon as possible either with a private or welfare institution. I have started Tin-Tin on a 14 day course of Synulox 250mg @ half a tab bid as well as Onsior 20mg for 4 days. I would like to see Tin-Tin again for a follow-up in 2 weeks time.

Kind regards,

Dr Friedl Le Roux, D18/11929
