20/01/2022

Dear Geffrey,

Poppy belonging to Reese Harley was seen here on 22/12/2020 with a large ulcerating tumour on her chin. There was a second growth on the rump. The growth on her chin was biopsied and found to be benign but was not easily resectable. It did not appear to be causing any pain at the time. Poppy has not been seen here since the stitches were removed in May 2021.

Rusty is epileptic and is on Phenobarbitone medication. He was doing well at his last visit here in April 2021 but is now due for a check up.

Kind regards,

Dr Rosemary Dallas
