Handwritten: *Handwritten signature*

I, the undersigned, have examined the **Canine** detailed above and submit the following findings.
Reason: Referred by the SPCA for an examination – Hindlimb weakness and ataxia.

Clinical exam: Clinically healthy
Habitus 4+ BAR, friendly and not in distress.
No external parasites found.
No wounds or injuries found.
No sores or scuffed nails.
Teeth in good condition, oral exam normal.

The following abnormalities were identified:
Bilateral hindlimb weakness and ataxia, paresis. Struggling to use hindlimbs.
Likely diagnosis = Degenerative Myelopathy.
Owner has a wheelchair at home for assisting mobility.
Is currently on CBD three times a week.

Treatment: The condition is not known to be painful but advised to rather cover for pain and discomfort, possible arthritis. Owner will need to use the wheelchair for Simba and socks on the feet.
Degenerative myelopathy is progressive and will necessitate euthanasia in the future. Currently the patient is happy and comfortable and owner is assisting him as best as possible.
Started on Inlacam daily.
