

VETERINARY REPORT

To whom it may concern

Vet report for A08389

ANIMAL DETAILS

Species: Canine

Breed: Pitbull

Sex: Female, intact.

Age: Adult

Tattoo/Microchip/Other: Nil

Name: Tamara

Description: Tan and white

EXAMINATION FINDINGS

On clinical examination of the dog, it has been found that the animal is in a fair to bad condition, and there is also signs of the animal being under fed, with an unhealthy dry and scabby hair coat.

There are no wounds on her body and no bruising was evident.

There is also evidence of a small amount of ticks and fleas all over her body.

- **Recommendation:** The animal does not need medical attention itself for any diagnosed conditions, but it will benefit her as her health condition is not where it should be, and she will benefit from a proper food diet, abundant fresh water and a general immune booster.

COMMENTS

Its evident the animal has been suffering from animal neglected over some time, due to the current health condition the dog is in, and that she definitely will benefit from receiving a better environment to stay in, and having a good quality diet to eat from. Her general health and skin condition show that there was very limited to no care for this animal, wherever it was removed from.

Yours sincerely

Dr E Pieterse (BVM 20')
