Veterinary Report

On wednesday 12 June 2024, a representative of African Tails, presented me with 4 cats taken from a home in Brooklyn/Rugby for veterinary care on behalf of the owner who was not present at the time. All of the cats had upper respiratory symptoms typical of snuffles and were infested with fleas. I tested them for FIV and FeLV and all were negative.

Appropriate medication was dispensed.

On Tuesday 6 August 2024, African Tails presented another cat from the same household with hindquarter paralysis. suspected to be the result of traumatic injury. Xrays were inconclusive and due to the severity of the condition, euthanasia was performed to limit further suffering. This cat also had severe symptoms of snuffles and I believe this may be related to conditions of overcrowding at the household.
