Therapeutic / Procedure

Seroma Drainage **Outcome:**

Drained 100ml straw coloured fluid from cyst

05:11PM

History

past 2 months noticed a growth under the tail, been getting bigger, couldnt bring him sooner due to work commitments-licks on it sometimes
 also struggles with hips-was on petcam some yrs back-helped for the 2 weeks he was on it but never got it again
 tried morbiflex joint supple-didnt seem to help, now giving Regal
 his left eye was very opaque and very red some months back-ms applied proline-seemed to help

05:13PM

Physical Exam

bar, a small area of whitish opacity and hyperpigmentation on ventrolateral aspect of left cornea(looks like scar tissue), both eyes have good PLR and appear normal, huge granuloma-like lesion on left hind hock area, swollen and seems infected, huge sac-like fluctuant mass just below the tail-100ml of straw-cooured fluid drained from mass

05:18PM

Assessments

arthritis
cyst under the tail
granuloma-left hock

Plan

adv NSAID trial plus GCS joint supple, abx for granuloma
recheck in 10d
adv may need to be on chronic NSAIDs but need to check on kidneys b4 that
adv cyct will prob fill up again-may need to be excised but not a very good candidate for GA

Wednesday the 26th of July 2023

05:46PM

History

mrs says seems a bit better though had a bit of loose stool the past few days
its easier to give the GCS liquid than the powder

05:47PM

Physical Exam

bar, cyst under tail hasnt filled up with fluid yet, granuloma on lh unchanged
seems more brighter when walking

05:48PM

Plan

adv due to age for now plan is to keep as comfy as possible
no need for further NSAIDs at this stage, cont with GCS, if seems in pain can call for pain meds

Thursday the 21st of September 2023

Seroma Drainage

09:16PM

History

Mass under tail base ongoing for a long time- was last drained in 2023 now much bigger
Struggles with arthritis
Of late changed diet and shampoo and pt started with severe dermal scaling

09:17PM

Physical Exam

QAR
Severe gait abnormality- high stepping, hunched back
Severe pruritic dermal scaling widespread worse on the back
Large mass on the tail base ventral aspect- drained 400ml of brownish red serous fluid(O says appears darker than last time)

09:20PM

Assessments

Severe arthritis
seroma??cyst??
Severe allergic dermatitis

09:21PM

Plan

Advised hills j/d to help with joints and skin- declined
Advised draining is a temporary measure and it is likely to fill up again soon, ideally surgical correction best bt nt ideal for pt age.
Advised cortisone short course, shampoo with sebaderm and monitor.
Discussed QOL and O will mo itor and let us know wen it's time

12:35PM

 Therapeutic / Procedure

Seroma Drainage
Outcome:

250ml of dark-almost pussy fluid drained-sac very warm to the touch

12:37PM

 History

did very well on preds-but family went away for some weeks
when came back, realised ski back to prev state-see hx
sac also just grew remarkably over past 3 weeks-starting to bother him now

12:39PM

 Physical Exam

bar, sac about 10x its prev size from last yr, warm to the touch
drained 250 fluid from sac

12:40PM

 Plan

see response to abx and preds
recheck b4 abx finished
adv may have to cut sac out since its bigger and starting to bothr him

Wednesday the 31st of July 2024

05:43PM

 History

the sac did not fill up again, couldnt bring him in b4 abx fnished
say had loose stool which resolved after abx were finished

the granuloma is smaller but still licks though not as much

05:44PM

Physical Exam

bar, walking well with a sl stilted gait on hls, granuloma on left hock about half the size it was 3 weeks ago, sac under tail same size as when I emptied it, no sign of inflammation or discomfort

05:45PM

Plan

adv extend abx for granuloma-mrs declined due to s/e observed
adv rather shampoo lesion with f10 shampoo and then apply f10 oint
