

VETERINARY REPORT

To whom it may concern

On Friday the 19th of July 2024 14:00 I was presented with 5 puppies confiscated by SPCA inspector Werner. They were confiscated from Lufda Village.

ANIMAL DETAILS

Species: Dog

Breed: Mixed breed

Age: +/- 1 months

Tattoo/Microchip/Other: Nil

Sex: 3 females and 2 males

Coat colour: Brown/white Black/white

Admission Numbers:

- A07571
- A07572
- A07573
- A07574
- A07575

EXAMINATION FINDINGS

- **Description:** Puppies are bright, alert, responsive. Body condition 5 on the Nestle Purina Body System. Numerous fleas were present throughout their coat. Adequate hydration on skin tent. Mucous membranes were pink and moist. Other clinical parameters were within normal limits. Blood smear evaluation revealed eosinophilia which is likely due to worm burden.
- **Cause:** External and internal parasites due to poor or no parasite control
- **Prognosis:** Good to excellent if adequate care is provided and routine health care is followed.
- **Recommendation:** In our care the puppies were dewormed and treated with tick and flea prevention. They were also injected with a Vitamin complex injection. Puppies to move to kennels for safe keeping.
