Subject: Urgent help needed for cats in Woodstock

Hi there

I hope this email finds you well

My backdoor neighbours at 18 beacontree lane in Woodstock (I'm at 22 Salisbury St, Woodstock, Cape Town, 7915, South Africa) have been reported to the spca multiple times in the past for the poor treatment of their animals. I don't know what happened to their previous cats, but they disappeared and were promptly replaced with 2 new cats. One was a fat ginger cat, who became very skinny within a few short months of being here. I've been feeding and monitoring their cats for years because of their severe neglect. In recent months I became aware that their 1 cat is very sick. She's been coughing really badly for months and recently developed other symptoms that are getting increasingly worse. She sneezes intensely and has a LOT of mucous coming from her nose . She seems more lethargic than usual and has been skipping some meals too, which is unusual since she would literally sit in the pouring rain and wait for me to feed her. I have explicitly told these people multiple times that their cat is ill and needs medical attention and have given them more than a fair chance to get her help, but they have not done so and I fear the cat is suffering. I believe her name is Tinkerbelle. I doubt the 2 other cats are very healthy either. I've noticed them having really bad skin, and problematic teeth (the ginger) from what I could see at a glance. Please send someone to have a look at these cats and investigate these people's ability to look after the myriad of animals they keep bringing home. Thanks in advance

Kind regards
Carolize Haupt
