20/12/2024

To whom it may concern,

Cody, an intact male Malinois, born on 12/12/2022 was brought in to Kanonkop Animal Clinic on 20/12/2024 for a health check.

He weighed 27kg, his body condition was slightly under that of an average Malinois. He was bright and alert and very excited. He readily ate treats in consult and the new owner also reported that in the few days since they have had him he has had a very good appetite.

On clinical examination; mucous membranes: pink, CRT:<2s, T: 39.1, heart and lung auscultation: NAD. Bloodsmear showed a mild to moderate neutrophilia. He was placed on a 5 day course of antibiotics. He will be coming back next week for a follow-up to repeat the bloodsmear.

If the smear does not improve or there are any other concerns during this time, we will follow up with more testing. Based on my examination I am happy to send him back with the owners.

Kind regards,

Dr Clarissa du Toit
