Clinical Examination

Examination Notes

H=4+ m/m=pink

CS=5/9 good condition.

moderate tartar upper molars, no gingivitis.

eyes/ears normal

In.nodes normal

Abd normal

Chest: normal heart and lung sounds

mild cranial lumbar spinal pain with palpation.

Ataxia, can get himself up when walking, slow cp in hindlegs but deep pain present. can stand. Urination and defaecating normal.

large s/c mass on caudal back, movable, soft. no pain.

Owner thinks the mass is causing the ataxia but explained to him it is due to spinal compression from IVDD - caused by the trauma a year ago.

Can try and remove or reduce size of mass with surgery but may not be able to remove everything.

Start on Metacam for chronic IVDD lesion.

No need for euth now but owner to consider quality of life as px is old.
