I was contacted on 3/12/2025 regarding Titan a male tiger on Vredenheim with regards to lame back leg.

I consulted on 4/12/2025 in the morning and found the patient to be 1/5 lame in his left pelvic limb.

No joint swelling or fractures were noted. I advised to monitor over the next 24 hours if no improvement anti-inflammatory treatment will be started but I will prefer to see if injury resolves without treatment.

If anti-inflammatory treatment fails the patient will be darted and if radiographs need to be taken that will be done.

Regards

Dr D. Brugman
