To whom it may concern

Regarding the 3 pigs at Hillside Farm, Gordon's Bay. The pigs were brought to the property in early December whereupon they were determined to have mange. The manager of the yard, Carmen Vosloo, administered the appropriate amount of dectomax as treatment to all 3 pigs which is being repeated every 10 days until the mange fully clears up. As a precaution, the preexisting pigs at the yard are also being treated.

As the yard's primary veterinarian this serves as record that I am aware of the pigs in question and the treatment plan being carried out. I am at the yard usually every month and am able to monitor their rate of healing.

Yours sincerely,

Dr Gail Lombardi BSc, BVSc
