Vet Report

+ - 5 female cross breed goats.

To certify that I examined the above animals on the 15-8-25. They all had been giving birth in the previous 4 weeks.

I found:

- 1) No vaginal discharge or returned placenta
- 2) They were all in good 4/5 body condition
- 3) Mammary development was average hence milk production was only fair.

My recommendation was that they get 1 kg of lucern hay daily for the next 60 days.

Regards,

Dr. JF. Triegaardt
