Voortrekkerweg 149, Posbus 435, Malmesbury. 7300. T: 022 482 2399 / 079 978 3947

25/08/2025

Owner: Mrs N Steyl, 5777 Vogelvllei Rd, Klein Dassenberg, Philadelphia.

Contact number: 072 907 0387

Patient: Female donkey; old [older than 10 years]

Clinical history:

I went out to see this patient, with the primary complaint of neglect / wounds on legs. The mare and her donkey friend were both adopted by the Steyls a few years ago:

On presentation the mare was bright, alert and very tame and loving. Clinical parameters all within normal limits- mucous membranes pink and moist, gut sounds very good and body condition score good; 4/5.

No lameness, and a small crack in the one front hoof [not important]. Housing/stable very good and food of very good quality.

Signs of chronic and new insect bite allergy on all 4 legs- currently under continuous treatment and supportive treatment, and preventative treatment from owner: treatment with F10 ointment and also Vetsbrands SUMMER SPRAY. This is sadly a common condition in a lot of donkeys.

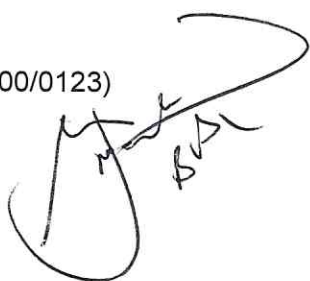

Mr and Mrs Steyl has been loyal and passionate clients of our clinic for years- they have a lot of dogs and cats and do not hesitate to bring them to us. They are prepared to go the extra mile for all their animals.

We are involve in their horses/donkeys treatment and vaccinations as well.

I do not feel that this is a welfare/ SPCA case or a neglected situation. Please contact me if you have any questions.

Kind regards

Dr AW Groenewald (D00/0123)
