To whom it may concern

Mr Parker brought in Molly for evaluation at our Epping facility Friday 20 March 2026.

On examination, we noticed a slight limp on the right front leg, we then offered to do x-rays for further examination.

The owner stated that he can't afford radiographs at this time.

We suspect the injury is elbow dysplasia.

Therefore, we have put Molly on a course of non-steroid anti-inflammatories for the duration of two weeks to stay comfortable.

However, this will not treat the injury.

Yours sincerely,

Dr Leandre Van Der Merwe
Head Vet/General Manager
Animal Anti-Cruelty League Cape Town
