HILLSIDE VETERINARY CLINIC Clinical History

FISHER FASIA MRS : Patient: GINZA

Date: 23/03/2026 Number: 135590 Time: 09:48:42 User: MEG DAY

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 4.95 Condition:0.0

Ginza dissappeared on Thursday night and only reappeard on Friday.
WHen he reappeared he was visibly distressed and all his nails were scuffed down to the nail Bed. He also has some burn marks on fur.
On presentation QAR- very anxious. All nails scuffed down to nail bed.
T 37.7, MM pink and moist, Heart: WNL, Chest OK. Abdo: soft and comfortable, Bladder- OK. O says eating but not going to bathroom- stress related.
Gave once off metacam inj and home on gaba 50mg- start on 1/4 and increase to effect (can do 1 50mg tablet BID) and see.

Date: 10/07/2025 Number: 127211 Time: 13:51:38 User: GEMMA

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 4.95 Condition:0.0

Feline acne, has had before but inflamed now. Otherwise well, not on any meds for AG and stable. V+ occ but longterm and not progressive.
Exam - wnl bar old injury with synechia R eye stable, mouth looks great, inflamed acne LHS chin, weight down 500g.
Re: acne - course pred, no plastic bowls, BP shampoos OID, and bactroban, should settled then manage with latter two as needed;
Re: weight - O will monitor, if progressive/other signs work up further.
Due vac - to see back 4-6wks and see how all going and do if well.

Date: 06/12/2024 Number: 120485 Time: 16:26:56 User: TRAVIS

UPPER RESP INFECTION

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 5.50 Condition:0.0

Patient presented with profuse sneezing and serous, almost mucoid nasal discharge
On clinical - no teeth, R eye has scarring and small synechia formation

Date: 27/09/2023 Number: 107377 Time: 10:27:35 User: CATH

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 5.20 Condition:0.0

Dom/dol premed later reversed with antisedan.
Prop/iso GA.
Once off Metacam peri-op.
Dental extraction of the few remaining teeth - all infected and decayed. Will be much better without them.
Anal glands flushed and otomax instilled.
Do not give preds for a few days as had metacam today and after flushing etc should not be necessary.
30/9/23- called and he is doing very well but has some form of cough but will let us know if it gets worse.

HILLSIDE VETERINARY CLINIC Clinical History

5/01 - repeat prednisilone 10mg quart tab twice a week as needed.

Date: 15/07/2023 Number: 105524 Time: 11:26:36 User: CATH

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 5.60 Condition:0.0

His bum has started to bother him again. He is on 2.5mg pred twice weekly now. Mouth - of remaining teeth most need extraction so recommend dental asap. Anal gland - right full but content normal. Left gland less full but initial content a bit bloods? Entrance to the gland still looks abnormal. Recommend that we have him in for a dental and flush the anal glands then too. Convenia injection given today - mostly for mouth. continue preds.

22/9 - AG have been fine on EOD pred (been doing a little more often as per CD) but dribbling and battling to eat a little now. Exam wnl bar +++ inflammation around remaining teeth LHS with ++ root exposure. Need removal, booked for next week, inj convenia, cont. pred as is and added epileptin 25mg BID, no petcam for now given chronic pred and not sure going to change much, AG flush while under as well.

Date: 25/02/2023 Number: 102028 Time: 16:28:57 User: CATH

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 5.50 Condition:0.0

When he got up this morning he wiggled his hind quarters and owner then noticed terrible odour from rear. Right gland - lumpy content but easy to express. Left gland inspissated content. more difficult to express but less of it. the entrance/exit to the anal gland looks infected - has an area of yellow purulent material present. Gave a Convenia and Dexafort injection. Recheck in 10 days.

4/3 - was doing well but sl scooting started again on Thursday. This is a recurrent issue q8wks. AG wnl today, R empty, L small amount reasonably normal contents. Feel need more here. Not convinced this is enough of an AG vs allergic issue to justify removal. Is on Z/D and up to date d/w. Add pred 2.5mg OID 7d then EOD and see if at EOD if can prevent, if does drop further. Will call 3 weeks to see if tolerating EOD dose as was a little withdrawn on higher doses, then again around 8 weeks to see how doing.

24/3 - doing well, tolerating lower dose, as such keep on EOD a further 5 weeks then re-assess again.

3/5 - doing very well as such drop pred to 0.25x10mg 2x/wk and r/c 2mo.

5/7 - doing very well, as such keep on 0.25x10mg pred 2x/wk a further 6mo and monitor, if doing well then can consider walking down further/stopping but feel this cat needs low regular dose to maintain.

Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 5.50 Condition:0.0

Expressed anal glands - owner said he is scooting at home. Not a lot of content but cleared what was there.

Owner keen to book a dental to have only remaining tooth in mouth removed - rest already extracted. Said approx R4000 but does depend

HILLSIDE VETERINARY CLINIC Clinical History

ontime it takes. Recheck glands then too.

26/10 - scooting ++ again, was fine after last time, otherwise well, no dysuria or dyschezia noticed. Exam wnl bar needs remaining teeth removed as discussed. Bladder moderately full, perianal area wnl, AG Linspissated, R some watery contents. Expressed.

? is there more going on driving this, d/w, inj dexafort and discussed poss allergic drive. If still ongoing despite this contact for extension pred. If more recurrences look at further allergy management. Monitor urination and stools closely to ensure no driving factor with these that warrants further work up.

13/12 - been 100% but today scooting recurred and some scratching in litter box, urination and defaecation still completely normal, exam wnl bar teeth as before which are terrible, L SM LN is enlarged and bilobed rest are wnl, susp as all inflammation localised to this area this is cause, do not feel further work up indicated for now but watch, O going to book dental soon so can then see from there. AG L inspissated again, R some fluid fill, expressed. Inj dexafort again. Discussed hypoallergenic diet as next step, O will monitor and if ongoing will look at doing.

23/12 - FH: Owner emailed. He is scooting again ++, otherwise fine. Disp Prednisolone 10mg 0.5tab/1/5 then 0.5tab/eod/14. Start z/d (already on Hills adult) and mix in over 5 days.

Anal gland expression
Temp: 0.0 Pulse: 0 Respiration: 0 Weight: 0.00 Condition: 0.0

Here for anal gland expression
Contents fairly thick, L > R
Client also keen to book a DS+P
