

oeteldier: _____

DBV Heidelberg (A16608546)

ES: _____

Owner / Eigenaar: _____

ESS / Adres: _____

Dog / Hond ☐

DLH

Cat / Kat ☒

Sex / Geslag: F

Breed / Ras: _____

Description / Beskrywing: silver tabby

Birth Date / Geboortedatum: ± 3/2026

Reg. No./Nr.: _____

Microchip No. / Mikr 965002000514177

Date Microchip implanted / Datum Mikroschip geïmplanteer: _____

WHY SHOULD I VACCINATE MY PET?

PUT SIMPLY - VACCINATIONS SAVE LIVES!

Vaccination plays a critical role in the maintenance of a healthy pet. Vaccinations have saved millions of pets' lives but, it is important to note that vaccines are preventative rather than curative. You should have your healthy pet vaccinated regularly so as to maintain a healthy status. Vaccinating a sick animal is not going to help and, in fact, is not advised. Vaccinating your pet can save you a lot of heartache. Vaccinations help to minimise the symptoms when your pet is exposed to viral and bacterial diseases, thus saving lives, and preventing unnecessary medical expenses on diseased animals, which could have been avoided.

How do vaccines work?

Vaccines help to strengthen the immune system of your pet so that, when they are exposed to certain diseases, their body is able to fend off the infection totally, or reduce the severity of the disease.

Is it possible to vaccinate against all diseases?

It is not possible to vaccinate against all diseases. Pets are vaccinated against common and/or serious diseases.
